TECHNICAL SKILLS

FRONTEND

React.js HTML5 CSS3 jQuery
Bootstrap

BACKEND

Node.js PHP REST APIs

DATABASE

MySQL Query Optimization Indexing

TOOLS & PLATFORMS

Firebase Redis Socket.io Git

DSA

Solved 300+ problems
(Arrays, Trees, Graphs, DP)

EDUCATION

B.Tech – Computer Science
Chandigarh University

SUMMARY

Full Stack Developer with 2+ years of experience building scalable healthcare and real-time systems handling 1,000+ daily transactions. Specialized in React.js and Node.js with strong expertise in API performance optimization, system design, and real-time architectures. Proven ability to reduce latency, migrate legacy systems, and deliver production-grade applications.

EXPERIENCE

Software Developer – Medcover Hospitals

Hyderabad

2024 – Present

- Built scalable hospital management system using modular React.js + Node.js architecture handling 1,000+ daily transactions.
- Designed billing automation reducing manual workload by ~40% and improving operational efficiency.
- Optimized 5+ critical MySQL queries using indexing, reducing API response time by ~30%.
- Migrated legacy PHP system to modern architecture improving maintainability and deployment speed.
- Developed real-time notification system using Firebase FCM with background workers.
- Owned end-to-end feature development from requirement analysis to deployment.

PROJECTS

Real-Time Notification System

Firebase FCM · Node.js · Service Workers

Token-based notification system with background workers for reliable real-time alerts.

github.com/akhileshmekarathi/project

Hospital Management System

PHP · MySQL · JavaScript

End-to-end system covering billing, reporting, and patient workflows with optimized DB queries.

Patient Portal Dashboard

React.js · Node.js

Secure portal for accessing reports and medical history with OTP-based authentication.

Real-Time Chat App

Socket.io · Firebase

Bidirectional messaging system with live updates and persistent storage.
