Professional Summary

Full Stack Developer with 2+ years of experience building scalable healthcare and real-time applications using React.js, Node.js, PHP, and MySQL. Experienced in backend optimization, real-time architectures, and scalable workflow automation. Improved API performance by 30% and automated enterprise healthcare workflows supporting 1,000+ daily transactions.

Professional Experience

Medicover Hospitals

Software Developer

Jan 2024 – Present

Hyderabad, India

- Developed scalable healthcare management modules using React.js, Node.js, PHP, and MySQL supporting 1,000+ daily transactions.
- Automated billing workflows reducing manual operational effort by 40% and improving processing efficiency.
- Optimized MySQL queries using indexing and restructuring techniques, improving API response time by 30%.
- Migrated legacy PHP modules to modern Node.js architecture improving maintainability and deployment speed.
- Implemented Firebase FCM-based real-time notification infrastructure with multi-device delivery support.
- Collaborated with doctors, QA teams, and administrators to deliver production-ready healthcare solutions.

Projects

Hospital Management System | PHP, MySQL, JavaScript

- Developed hospital workflow modules including billing, reporting, and patient management systems.
- Optimized database queries and implemented role-based access control improving performance and security.
- Enhanced operational workflows by automating healthcare management processes for faster execution.

Real-Time Notification System | Firebase FCM, Node.js

- Built Firebase FCM-based notification infrastructure supporting multi-device real-time delivery.
- Implemented retry handling and background worker architecture for reliable notification delivery.
- Reduced notification latency and improved delivery consistency across production systems.

Real-Time Chat Application | Socket.io, Firebase, Node.js | Live Demo

- Developed real-time messaging platform with typing indicators and online presence tracking.
- Integrated Firebase persistence with Socket.io event broadcasting architecture.
- Enabled scalable low-latency communication for real-time messaging workflows.

DealScout AI Dashboard | React, Node.js, AI APIs | Live Demo

- Built AI-powered dashboard for real-time product comparison and deal tracking.
- Integrated external AI APIs with optimized frontend rendering architecture.
- Improved dashboard responsiveness using modular React component optimization techniques.

Loan Management System | React, Firebase, Tailwind CSS | Live Demo

- Developed Firebase-powered loan management platform with dashboard analytics and interest calculation engine.
- Implemented role-based access control and responsive financial workflow management.
- Improved loan tracking efficiency through automated reporting and analytics dashboards.

Technical Skills

Frontend: React.js, JavaScript, HTML5, CSS3, Bootstrap, jQuery

Backend: Node.js, PHP, Express.js, REST APIs

Databases: MySQL, Redis, Firebase

Tools: Git, Firebase FCM, Socket.io, Tailwind CSS

Core Skills: API Optimization, Authentication, Real-Time Systems, Database Indexing, System Design

Advanced: REST APIs, WebSockets, Firebase FCM, RBAC, CI/CD, GitHub Actions, Vercel, Render

Key Achievements

- Handled 1,000+ daily healthcare transactions on production systems.
- Reduced billing workflow effort by 40% through automation.
- Improved API response times by 30% using database optimization.
- Delivered scalable real-time notification infrastructure using Firebase FCM.
